Data Integration Specialist

Description

As part of Daman's Data Engineering team, you will be architecting and delivering highly scalable, high-performance data integration and transformation platforms. The solutions you will work on will include cloud, hybrid, and legacy environments that will require a broad and deep stack of data engineering skills. You will be using core cloud data warehouse tools, Hadoop, spark, events streaming platforms, and other data management-related technologies. You will also engage in requirements and solution concept development, requiring strong analytic and communication skills.

Responsibilities

- Function as the solution lead for building the data pipelines to support the development/enablement of Information Supply Chains within our client organizations – this could include building (1) data provisioning frameworks, (2) data integration into the data warehouse, data marts, and other analytical repositories (3) integration of analytical results into operational systems, (4) development of data lakes and other data archival stores.
- Optimally leverage the data integration tool components for developing efficient solutions for data management, data wrangling, data packaging, and integration. Develop overall design and determine the division of labor across various architectural components
- Deploy and customize Daman Standard Architecture components
- Mentor client personnel. Train clients on the Daman Integration Methodology and related supplemental solutions
- Provide feedback and enhance Daman intellectual property related to data management technology deployments
- Assist in the development of task plans including schedule and effort estimation

Qualifications

- Core Data Experience – Must show competency in core data & analytics concepts
- Data modeling for data warehouse 3NF & datamarts – star
- High level of competency with SQL, including advanced concepts
- Batch Data Movement – ETL (tool experience is preferred, but having deep knowledge of concepts is mandatory)
- Traditional Relational Databases – Prefer DB2/UDB
- Data Engineering Experience
- Distributed data & compute (partitioning, indexes, access patterns)
- Hadoop / Big Data Ecosystem (HDFS/S3, Hive, Spark)
- NoSQL Platforms & Concepts (Doc Store – Couchbase, Wide Column Store – Cassandra, Graph – Datastax Enterprise Graph)
- Event-based application patterns & streaming data
- Kafka
- Kafka producers & consumers
- Nifi

Employment Type

Full-time

Job Location

Austin, Austin, United States

Date posted

April 16, 2021

- Java Enterprise Application Development
- Bachelor's Degree or foreign equivalent in Computer Science, Electrical Engineering, Mathematics, Computer Applications, Information Systems or Engineering is required
