Information Governance Advisor

Description

As a leader in our Information Governance practice, this person is one of the executive leaders of our governance engagements. They provide strategic vision, establish key indicators and streamline activities that ensure the client governance program is adhering to the best practice governance policies, standards, and controls. The primary role is to define an operating model for the client data governance program taking into consideration the client maturity, system support, business backing, and overall funding commitment. They serve as a coach and mentor and provide guidance to cross-functional team members to ensure success in achieving business objectives.

Responsibilities

- Provides strategic partnership to anticipate opportunities for information/data management governance activities and projects.
- Influences implementation of information governance and best practices, tools, and associated processes across the enterprise.
- Influences/drives business awareness of information/data governance through work activities to include awareness forums.
- Authors information governance guidelines, principles, policies, and standards for information/data stewards, stakeholders, and development teams.
- Orchestrates audits of information governance capabilities through subject matter experts.
- Develops prioritization methods for and implementation plans for information governance initiatives.
- Responsible for acquiring and applying expert knowledge of various lines of the business, channels, and their applications and processes to include providing advice on satisfying regulatory requirements related to information governance and management.
- Leads the assessment and coordination of information governance training requirements and learning objectives for the enterprise.
- Prepares formal reports and presentations of findings and recommendations; presents findings to various levels of leadership.

Qualifications

- Experience in Information or Data related practices to include: information governance, information management, information architecture, IT, analysis, and reporting
- Participate in project planning and architecture for the data environments.
- Train team members and business users on the use of analytics environments.
- Develop business requirements.
- Bachelor's Degree or foreign equivalent in Computer Science, Electrical Engineering, Mathematics, Computer Applications, Information Systems or Engineering is required
